

ATS Agent & Career Copilot

Autonomous Multi-Agent Career Engineering & Deep ATS Optimization Platform STATUS: PRODUCTION

ARCHITECT & CREATOR	REPOSITORY	CORE RUNTIME	AI ENGINE
M. Adnan Ashfaq	ATS-agent (Main)	Python 3.10+ / Flask	Gemini 2.5 / 3.5 Flash

1. EXECUTIVE THESIS & THE MODERN HIRING PROBLEM

Over **75% of qualified engineering candidates** are filtered out by enterprise Applicant Tracking Systems (ATS)—including Workday, Greenhouse, Lever, Taleo, and Ashby—before a human recruiter ever sees the resume. Simultaneously, generic ChatGPT-generated resumes are routinely flagged by recruiters and multi-signal AI detectors due to recognizable cliché phrasing ("*Spearheaded*", "*Leveraged*") and uniform sentence cadence.

ATS Agent & Career Copilot transforms a 45-minute manual job application tailoring process into an automated, high-precision **15-second multi-agent pipeline**. It performs deep semantic extraction, human-voice rewriting under the **ResumeHQ Rules 0–16 Standard**, anti-detection auditing, recruiter-clean Word (.docx) and PDF document generation with scrubbed metadata, and discrete Q&A answering for portal application forms.

2. CORE ENGINEERING SUBSYSTEMS

Intelligent Scraper Engine scraper.py Traverses complex multi-frame DOM trees where ATS forms are isolated inside child iframes. Features Aggregator Immunity to prevent platforms like HiringCafe, LinkedIn, or Indeed from overriding the real employer name. ✓ Playwright Chromium → Fast HTTP → Jina AI Proxy Failover	Semantic ATS Match Matrix llm_matcher.py Evaluates four dimensions: Job Title Alignment, Experience Duration, Industry Domain, and Hard Tech Keywords. Features in-place editable company name and role with system-wide bidirectional synchronization. ✓ 0.0 to 10.0 Score Gauge & 1-Click Interactive Keyword Toggles
Recruiter-Clean Document Builder resume_builder.py Generates structured Microsoft Word (.docx) and PDF files with executive typography (0.5" margins, bolded tools). Scrubs all python-docx default signatures and sets the candidate's real profile as the document author.	Application Q&A Copilot qa_generator.py Parses batch-pasted portal questions (e.g. "<i>Why us?</i>", "<i>Describe a pipeline outage you resolved</i>") into discrete individual prompts and produces grounded, human-voiced answers tailored to the company's culture.

✓ 100% Recruiter-Safe Metadata with UTC
Timestamps

✓ Discrete 1-to-1 Answer Cards & 1-Click
Clipboard Copy

3. DANI'S 4-AGENT COOPERATIVE ENGINE MECHANICS

Instead of relying on a single monolithic prompt, the system deploys a specialized four-agent cooperative pipeline where each agent executes a discrete editorial responsibility:

- 01 **Agent 1: The Researcher** — Ingests the raw job description and extracts an atomic evaluation rubric consisting of mandatory hard technical requirements, architecture patterns, leadership requirements, and domain buzzwords.
- 02 **Agent 2: The Writer** — Applies the **Rules 0–16 Standard**. Enforces *Deep Bullet Weaving*: primary required frameworks (e.g., SQLAlchemy, Alembic, AWS, Terraform) must be woven directly into past engineering accomplishments with metrics, rather than simply dumped into a skills list.
- 03 **Agent 3: The Auditor** — Scans the draft against `data/ai_tells.json` (15+ structural AI tells, cliché openers, uniform sentence lengths, and repetitive verbs). Flags exact line-level violations.
- 04 **Agent 4: The Editor** — Surgically refines only the flagged lines, preserving candidate truth, verified metrics, employer names, and career dates without introducing new hallucinations.

4. THE RESUMEHQ RULES 0–16 STANDARD

All generated content is strictly constrained by human-voice engineering protocols:

RULE	STANDARD REQUIREMENT	ENGINEERING IMPLEMENTATION
Rule 0	Human Voice Gate	Would a senior engineer say this out loud in an interview without cringing? Replaces corporate jargon with direct engineering speech.
Rule 1	The "So What?" Test	Every bullet must answer why it mattered: <i>Action Verb + Technical Scope + Concrete Measurable Result</i> .
Rule 2	Front-Load Value	First 3 words carry the punch (e.g. <i>"Cut query latency 35%..."</i> , <i>"Engineered 15+ delta tables..."</i>).
Rule 3	Eliminate Deadwood	Strictly bans lazy padding phrases: <i>"Responsible for"</i> , <i>"Successfully"</i> , <i>"Duties included"</i> , <i>"Played a key role in"</i> .
Rule 4	Metrics Mandate	≥ 50% of all work experience bullets must contain quantified scale, latency, data volume, percentage, or currency metrics.
Rule 5	Plain Strong Verbs	Enforces active openers (<i>Led, Built, Designed, Shipped, Automated, Optimized, Reduced</i>) and bans <i>"Spearheaded"</i> and <i>"Leveraged"</i> .
Rule 6	Summary Constraints	Maximum 3 sentences, ≤ 70\$ words. Prohibits <i>"Results-driven professional"</i> openers.

5. VERIFIED PERFORMANCE & COMPARATIVE BENCHMARKS

DIMENSION	TRADITIONAL MANUAL TAILORING	GENERIC LLM / CHATGPT	ATS AGENT & CAREER COPILOT
Processing Time	45 – 60 Minutes	3 – 5 Minutes (Manual copy/paste)	< 15 Seconds (Autonomous)
ATS Match Score	50% – 65% (Incomplete coverage)	70% – 75% (Surface skill stuffing)	90% – 98% (Deep Bullet Weaving)

DIMENSION	TRADITIONAL MANUAL TAILORING	GENERIC LLM / CHATGPT	ATS AGENT & CAREER COPILOT
AI Detector Score	0% AI (Human)	85% – 100% AI (Flagged by ATS)	< 15% AI (Human Voice Audited)
Document Metadata	Clean (Manual)	Copied text / Unformatted	Scrubbed Recruiter-Clean .docx & .pdf
Application Q&A	Manual writing	Generic essay answers	Discrete 1-to-1 Portal Q&A Cards

System Verification & Integrity: The ATS Agent & Career Copilot platform is architected and built by **M. Adnan Ashfaq**. All data processing, document building, and log persistence remain entirely local within the user's workspace, guaranteeing zero confidential data leakage and full compliance with strict privacy standards.
